

At the Wright Kitchen we understand that your kitchen is the heart of your home and that no two kitchens are the same. We offer a complete line of cabinets that can be specifically designed to make your space functional, efficient and beautiful.

Start by Measuring Your Kitchen Space:

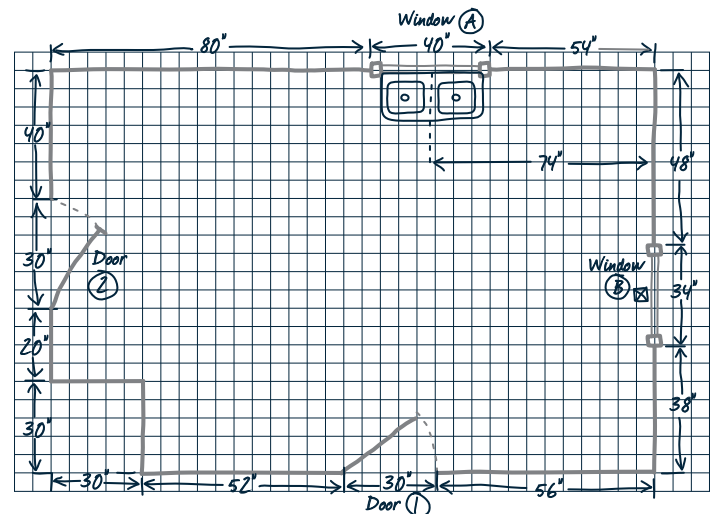

The Wright Kitchen team is focused on kitchen design. Our team will customize a new kitchen, incorporating all of your needs and desires.

Start by drawing a diagram of your kitchen on the opposite side similar to the example provided below.

Your Wright Kitchen designer will use these measurements to generate a 3 dimensional design and floor plan.

Start Here:

- All measurements should be in inches.
- Measure your sink window wall first, start in the corner and measure to the outside edge of any window or door trim or the corner.
- Measure total length of walls corner to corner.
- Indicate centre line of sink, door and window locations and location of electrical plugs.
- Window and door measurements should be from outside of trim to outside of trim.
- Indicate direction of all door swings.
- Measure room height, and indicate drop ceiling or bulkhead areas with dimensions.
- Indicate appliance locations on the diagram and record appliance sizes in the area provided.
- Indicate what you would like above stove/range... microwave, decorative hood/vent, etc.
- Double check all measurements.
